DETAILED ACTION

1. The non-final rejection as set forth in paper mailed on 05/02/2003 is withdrawn in response to applicants' response.
2. A new rejection is made as set forth in this Office Action.
3. Claims 35-37, 40-63 and 65-67 are pending in the application.

Claim Rejections - 35 USC § 112

4. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

5. Claims 35-37, 40-63 and 65-67 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. In reference to independent claims 35, 36, 37, 50 and 67, applicants cite "...wherein the outer conductive sheath is not formed on the outer surface...". Also, in reference to independent claims 56, 62 and 66, applicants cite, "...wherein the outer conductive sheath is not formed over the substrate outer substrate...". Taking this into consideration, the Merriam Webster Dictionary defines the preposition "on" as a function word to indicate position supported by the top surface of. Likewise, the adverb "over" is defined as across a barrier or intervening space. Therefore, the "outer conductive

sheath" as described is on and over the outer surface of the substrate. Therefore, there is a lack of description of the claimed invention.

Also, claim 66 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In reference to claim 66, applicants cite, "...wherein the void space is formed by removing masking material from elevationally below conductive material portions extending between the terminal members...". However, there are 2 conductive materials previously recited. Therefore, there is lack of antecedent basis as to which conductive layer is "formed by removing masking material from elevationally below conductive material portions extending between the terminal members" as recited.
